OBJECTIVE

Passionate data science enthusiast dedicated to uncovering insights through programming, data visualization, and machine learning, with a focus on solving complex challenges and driving data-driven decisions.

PROJECTS

Real Or Fake News Detection   2023

Project Overview: Developed a machine learning model to classify news articles as real or fake using text processing and a Linear SVC algorithm.
Why This Matters: Helps combat misinformation by providing an automated tool to identify fake news.
Key Features:

- TF-IDF vectorization for text data.
- High accuracy classification with Linear SVC.
- Effective distinction between real and fake news articles.

Weather Prediction in Australia   2024

Project Overview: Developed a model to predict weather conditions in Australia using machine learning techniques.
Why This Matters: Accurate weather prediction is vital for agriculture, disaster management, and daily planning.
Key Features:

- Implemented DecisionTreeRegressor for precise weather forecasts.
- Enhanced prediction accuracy with RandomForestRegressor.
- Applied cross-validation to ensure robust and reliable predictions.
